

CITY OF WASHINGTON, ILLINOIS Public Works Committee Agenda Communication

Meeting Date: March 6, 2023

Prepared By: Jon Oliphant, AICP, Planning & Development Director

Agenda Item: Jennifer Lane Sewer Main Extension Consideration

Explanation: The owner of a five-unit apartment building at 1106 Jennifer Lane, Jake Schick of Schick Holdings, LLC, has expressed interest in adding more rental units to the property. Jennifer is a private street that only provides access to this property. The property is currently on a septic system. Adding more units with a minimum of two bedrooms to that system would be cost prohibitive and he has asked about potentially extending the City's sanitary sewer main to the property.

The closest sewer mains are located on Oakwood Drive, just west of S. Main Street, and on S. Main just north of Oakwood. It is approximately 2,600' from the current termini to extend along S. Main and west on Guth Road to cover each of the properties in the city limits. There are 27 principal structures on S. Main, Guth, and Jennifer that are not on City sewer, including Grace Bible Church. City water is provided for each of these parcels.

Fiscal Impact: The estimated engineering and construction cost to extend the sewer to the furthest Guth property is approximately \$500,000. Any property connecting to the City's sewer would be subject to payment of the sewer connection fee (\$4,317/unit) and the sewer subdivision development fee (currently \$1,067.50/unit, which increases annually on January 1 by 3.5% or the rate of inflation, whichever is greater). Per the zoning code, the maximum additional density that would be permitted at 1106 Jennifer would be 26 units. Should 26 units be constructed to go along with the five currently there, the total sewer connection and 2023 subdivision development fee charge would be \$166,919.50.

Action Requested: Staff requests direction on the consideration of the extension of the City's sewer main on Oakwood, S. Main, and Guth. Staff has not received inquiries from the property owners on these streets and it may be best to send letters to each of them to gauge their interest in a possible sewer connection. If there was enough of a commitment to connect and the resulting revenue, there could be justification to complete the extension. It could also potentially increase growth opportunities to the south. However, if there was little to no interest for other connections, it would not appear to make economic sense for the City's involvement with such a project at the present time.

Potential Sewer Extension
