

**CITY OF WASHINGTON, ILLINOIS**  
**City Council Agenda Communication**

**Meeting Date:** 3-18-2024

**Prepared By:** Dennis Carr – City Engineer

**Agenda Item:** Washington Park Culvert Extension

**Discussion:**

During discussions with the Park District regarding the Washington Park Berm project, they had requested that we bury the storm sewer that outlets from the to inlets in the road in front of Lincoln Grade School. They drain through a pipe outfall and then a swale and cause a bit of an erosion problem in the park.

City Staff can perform the work, but the material cost requires council approval,

**Fiscal Impact:**

The cost to perform this work is in the ballpark of \$25,000. Our current stormwater budget has adequate funds available to perform this work.

**Action Requested:** Staff requests approval to purchase and install over 500 feet of storm sewer from the existing outfall to the creek for a price not to exceed \$25,000.
